Software Developer | Backend & AI Systems

SUMMARY

Backend and AI Engineer with production internship experience building Django APIs, ML pipelines, and LLM systems. Comfortable across the stack — from PostgreSQL query optimization to fine-tuning BERT and deploying RAG APIs with Docker.

SKILLS

Languages: Python, JavaScript, C++, Java

Backend: Django, Flask, FastAPI, REST APIs, Redis, Celery, Microservices

AI/ML: PyTorch, LightGBM, XGBoost, BERT, LangChain, ChromaDB, SHAP, LSTM

Databases: PostgreSQL, MySQL

DevOps: Docker, CI/CD, Git

EXPERIENCE

- Ordinet Solutions Pvt. Ltd. Feb 2025 – Jul 2025
Software Development Intern
 - Engineered 2 Django applications automating 15+ financial reporting workflows, cutting processing time from 4 hours to 22 minutes.
 - Designed 12 REST APIs on Django + PostgreSQL handling 50k+ daily records; reduced query latency from 620ms to 210ms via indexed joins.
 - Implemented RBAC middleware securing 12 endpoints across 4 user roles, eliminating weekly manual audit fixes.
 - Containerized 3 services with Docker and configured GitHub Actions CI/CD, compressing release cycles by 40%.
- Noviga Automation Pvt. Ltd. May 2024 – Sept 2024
Backend Development Intern
 - Built 6 Flask REST APIs for an asset lifecycle management system tracking 2,000+ enterprise assets; resolved N+1 query issues reducing response time by 25%.
 - Designed normalized SQLAlchemy models with Marshmallow validation and deployed containerized backend services.

PROJECTS

- Fraud Detection API
 - Trained and tuned LightGBM on 284k transactions with SMOTE-balanced classes; achieved 0.83 F1 on fraud class, outperforming XGBoost (0.76) and Isolation Forest (0.26).
 - Deployed SHAP-powered explainability via Dockerized FastAPI returning per-prediction feature attribution in under 50ms.
- Legal Contract Clause Extractor
 - Fine-tuned BERT on the CUAD dataset (510 contracts, 8 clause types) achieving 0.93 F1 on Governing Law and 0.78 on Anti-Assignment clauses.
 - Integrated Gemini API for plain-English clause summarization with risk flagging; deployed via FastAPI with Streamlit drag-and-drop PDF interface.
- Document RAG API
 - Built RAG pipeline over RBI and GST regulatory PDFs using LangChain and ChromaDB with semantic chunking and MMR retrieval.
 - Served multi-document Q&A with source attribution via Dockerized FastAPI; integrated Gemini API for answer generation.
- Vessel Trajectory Prediction (LSTM)
 - Trained LSTM on 1.2M AIS records for vessel forecasting; engineered 8 temporal features and achieved MAE of 0.42 nautical miles at 30-min horizon, outperforming XGBoost baseline by 31%.

EDUCATION

- PES University 2022 – 2024
Master of Computer Applications
- MediCaps University 2019 – 2022
B.Sc. Computer Science
